Protection Releases

Thermo-magnetic Release Type - DN1

DN1 thermo-magnetic release offers reliable protection against overload, short-circuit and earth faults via multitap CTs. with ambient temperature compensation from -5°C to 50°C.

Overload Protection (Phase)

Unique individual phase O/L setting adjustment helps to avoid the nuisance tripping of ACBs in unbalance load condition (due to single phase loads) on distribution transformer. Overload pick-up range: 0.75 to 1 times I_n

Short-Circuit Protection

Two taps on CTs (working as rating plug) help in selecting operating threshold. Short-Circuit pickup range: 5.5 and 7.5 times I_n with minimum impulsion time of 25 ms to prevent nuisance tripping due to transients

Earth Fault Protection

Offered with auxiliary earth fault release module. Earth-fault pick-up range: 0.2 to 0.5 times I_n

The above drawing is for EDO breakers.

1) For MDO/MF versions

Ref no. 3, 10, 11 are not applicable

E, B, C, D, A, 15 are applicable only in electrical breakers.

2) For EF versions

The ref. no. 12, 13, 14, 15, 16, 17, 18, 19, 20, 21 are provided as per customer requirement.

3) When using AN1 Annunciator Module with SR18G/18Gi (with display releases)

A) AS+ & AS- always appear after 5,6 nos. of the SIC.

B) If 1,2,3,4,5,6 nos. of SICs are not there, AS+ & AS- will appear first.

C) SIC 13 and 14 Nos. are not offered in 3P EDO and 3P MDO standard breakers.

Accessories

Type	Data
Lockable Trip Push Button (LTPB) 	Mounted in place of normal trip push button. With this, ACB can be locked in trip condition. For interlocking, LTPBs are offered in the following combinations: › 4 different types of keys i.e. AA, BB, CC and DD suitable for 2 I/C & 1 B/C schemes › Combination of L, M, N, LM and MN locks, which are suitable for 3 I/C & 2 B/C schemes › Combination of K, L, M, N, KL, LM and MN locks, which are suitable for 4 I/C & 3 B/C schemes › Combination of J, K, L, M, N, JK, KL, LM and MN locks, which are suitable for 5 I/C & 4 B/C schemes
View of the Cradle  Door Interlock Racking Interlock Locking in 'Isolated' Position	Locking in Isolated Position (LIP) The facility of locking the ACB in Isolated position is available in Drawout ACBs. This is useful to achieve interlocking between Main & Standby source. Similar lock is available as LOCK IN ANY POSITION. Door Interlock This ensures: › Unless the panel door is closed, breaker cannot be racked in or out › Unless the breaker is in Isolated Position, it is not possible to open the panel door Racking Interlock This ensures that breaker cannot be racked in/out unless the ACB is in tripped/open condition.
Mechanical Interlock 	It is possible to provide "Mechanical Interlock" between two breakers of the same or different ratings in vertical or horizontal configurations. Mechanical interlock is available for ACBs upto 4000A by flexible cables of 2 metres.

Type	Data
C1 	Common indication of tripping due to overload, short-circuit and earth faults. › Provided by micro-switch C1 fitted inside the ACB › Available as an option in all releases
C2 	Separate indication of tripping due to overload, short-circuit and earth faults. › For release type DN1, this is provided by micro-switch C1 & C2 (C2 fitted inside release)
AN1-Annunciator Module 	Remote indication of tripping due to overload, short-circuit and earth faults. › Can be used with releases type SR18/SR18G/SR21i/SR18G & SR18Gi with display › Individual fault indication provided by three separate LEDs for » Long time faults » Short time fault/instantaneous fault » Earth fault » One potential free contact rated 5A at 230V AC available for each type of fault › Flush mounting on panel (H-W-D=92mm x 46mm x 105mm) › Operating voltage: 240V AC
C5 	Indication for operation of shunt release or undervoltage release. › Provided by micro-switch C5 fitted on the shunt release or undervoltage release

Type	Data	Technical Data					
Shunt Release 	- For remote tripping of the breaker - Shunt release coil is short time rated and is disconnected from the circuit by an auxiliary contact when the ACB trips (Refer to wiring diagram) - Low power consumption - Two types available: » EA for DC application » EA1 for AC application	Type of Release	Nominal Voltage Use (V)	Power consumption at pick-up	Operation Limit		
		EA1	110 AC	800 VA	10-130% V		
			240 AC	800 VA			
			415 AC	800 VA			
		EA	24V DC	32 W	65-130% V		
			48V DC	125 W			
			110 DC	45 W			
			220 DC	30 W			
		Note: Other voltages available on request					
		Under Voltage Release 	Type MV With no intentional time delay Notes: When under voltage release is provided, the ACB can be closed only when supply is available to the under voltage release.	Parameter		Specification	
Nominal voltage				240V & 415V 50Hz AC, 220V & 415V 60Hz AC, & 24V DC			
Pick up (V)				80% Ue			
Drop off (V)				35-65% Ue			
VA Consumption				Pick up - 23 VA Hold on - 8.5 VA			
Watt loss				6 W			
Closing Release 	Closing release remotely closes the circuit breaker if the mechanism spring is already charged.	Rated voltage (Us)	Power consumption		Range of operation		
			Pick-up	Hold-on	85-110% Us		
		110V, 50Hz 240V, 50Hz 220V, 60Hz	320 VA	50 VA			
		110V DC, 220V DC 24V, 30V, 48V DC	300 W	50 W			
		Spring Charging Motor 	Electrical charging device automatically charges the mechanism spring of the circuitbreaker. After circuit-breaker closing, the geared motor immediately recharges the closing spring. Thus instantaneous reclosing of the circuit-breaker is possible following opening operation.	Rated operational voltage (Ue)		Power consumption	Range of operation
240V AC	320 VA			85-110% Ue
