ABOUT US

Lauritz Knudsen Electrical & Automation, formerly known as L&T Switchgear, is a leading player in the electrical industry owing to its 70+ years of strong legacy and commitment to the nation's growth. The brand is dedicated to providing a wide range of electrical and automation products and solutions to vital sectors of the economy, including industries, utilities, infrastructure, buildings, and agriculture. Our extensive portfolio includes low-voltage and medium-voltage switchgear, automation solutions, tailored software, and services.

With manufacturing operations in Ahmednagar, Vadodara, and Coimbatore, we adhere to global standards of excellence. Our operations are supported by well-equipped, in-house design and development centers, as well as tooling facilities, ensuring precision in manufacturing.

We proudly operate six Switchgear Training Centers (STCs) across Pune, Lucknow, Coonoor, Vadodara, Delhi, and Kolkata. These centers offer tailor-made classroom courses and lab learning experiences for technicians, customers, engineers, professionals, and students.

With a deep national presence and one of the largest electrical distribution networks, comprising over 1500 partners across the country, we are committed to driving excellence and delivering superior products and solutions that power India's growth journey.

FEATURES TO MEET EVERY APPLICATION

Contact System

- › Double Break with low let-through energy
- › High Breaking Capacity up to 200kA @ 415V AC
- › 100kA @ 690V AC at 100% Ics
- › 50kA @ 800V AC offering for Solar PV String inverters
- › 1000V/1500V PV DC Offering

Thermal - Magnetic Release

- › Extended Overload Setting of 67%
- › 16A to 800A Offering
- › Ambient Temperature Compensation
- › Suitable for wide temperature range

Mechanism

- › Class II Front Facia
- › Double Insulation
- › Positive Isolation
- › High Electrical and Mechanical Life

Electronic Release

- › Extended Overload Setting of 25%
- › Individual Fault Indication LEDs
- › Battery Operated In-built Display
- › Advanced Metering and Protection
- › Motor Protection Variant with effective Type 2 Coordination

Modular Architecture

- › Compact Size
- › Late Personalization
- › Interchangeability of Releases
- › Reduced Inventory for internal accessories

Modules

- › Temperature Monitoring & Protection
- › Zone Selective Interlocking for effective Selectivity
- › Communication Module for metering & control
- › Remote Operation for Motorized MCCB
- › Breaker Status, Alarm & Trip with Records

Versatile Range of Terminations

Standards & Approvals

Dsine DZ range of MCCBs and Accessories comply with following international standards

1. IEC 60947-1, EM 60947-1, IS/IEC 60947-1

Low voltage switchgear and controlgear, Part1: General Rules

2. IEC 60947-2, EM 60947-2, IS/IEC 60947-2

Low voltage switchgear and controlgear, Part2: Circuit Breakers

3. IEC 60947-3, EM 60947-3, IS/IEC 60947-3

Low voltage switchgear and controlgear, Part3: Switches, disconnectors, switch - disconnectors and fuse combination units.

4. IEC 6094 7-4, EM 60947-4, IS/IEC 60947-4

Low voltage switchgear and controlgear, Part4: Contactors and motor starters

Third party certificates (ERDA/CPRI) are available for dsine DZ range of MCCBs

NABL

NABL accreditation acknowledges the technical proficiency of testing, calibration, or medical laboratories for specific tasks in accordance with the ISO/IEC 17025:2005 Standard. Accredited laboratories are obligated to consistently meet the criteria of laboratory accreditations, which are assessed during Surveillance and Re-assessment visits by NABL. Additionally, accredited laboratories must demonstrate their technical

expertise through successful participation in recognized Proficiency Testing Programs.

Lauritz Knudsen Switchgear Testing lab holds NABL accreditation, contingent upon ongoing satisfactory adherence to the aforementioned standard and additional NABL requirements. All dsine DZ range MCCBs undergo testing in Lauritz Knudsen NABL accredited Switchgear Testing Lab.

CE Marking

The CE marking signifies that a product meets the essential requirements of relevant European laws or directives concerning safety, health, environment, and consumer protection. Typically, this conformity with directives is achieved through self-declaration and is mandatory for products in the European Economic Area (EEA) to facilitate trade among member countries. The responsibility for affixing the CE marking lies with the manufacturer or their authorized representative within the EEA. This marking allows manufacturers to demonstrate

compliance with a common set of laws required by all EEA countries, enabling free trade movement within the EEA.

Regarding Lauritz Knudsen dsine DZ range of MCCBs, it conforms to the low voltage directive 73/23/EEC as amended by directive 93/68/EEC, if it is used for its intended application and is installed and maintained in accordance with professional practices, relevant installation standards, and operating instructions.

IECEE CB SCHEME - DEKRA (KEMA) certified

The IECEE CB Scheme represents a mutual agreement between participating countries and certification organizations. When a manufacturer uses a CB test certificate from an accepted National Certification Body (NCB), they can receive certification marks from those NCBs in the countries where they are located. Lauritz Knudsen dsine DZ range of MCCBs has been

certified for the IECEE CB Scheme by DEKRA (KEMA), a globally recognized organization with 150 years of experience in testing, inspection, certification, risk management, and verification.

Committed to Environment

dsine DZ MCCB range complies to RoHS & REACH directives. Smaller footprint, usage of green plastics and halogen free flame retardants, recyclable packaging, low carbon footprint, declaration of PEP & EoL ensures our commitment towards

environment during manufacturing, distribution, installation, use phase and end of life of the product.

Overview

1) Double Break Contact System

- a. Compression spring based flipped lock current limiting contact system design
- b. Improved contact dynamics
 - i. Flipped lock mechanism accelerates the opening of contacts during short circuit
 - ii. Higher angular and linear opening per break
- c. Improved contact dynamics facilitate
 - i. Low Let through energy
 - ii. Minimum Cut-off Current
 - iii. Higher Voltage breaking capacities
- d. erosion compensation continuous service
- e. Higher Electrical Life
- f. The entire current carrying path is optimised for low watt loss

2) Modular Mechanism

- a. Quick make, break and trip operations
- b. Suitability Positive Isolation
 - i. True indication of Contact system
 - ii. Ensure Customer's safety
- c. Trip Free mechanism
- d. Higher Mechanical life

3) Arc Chamber

- a. Optimal design of Arc chamber facilitating efficient and faster Arc quenching even at higher voltage and higher amplitude

4) Electronic Trip Unit

- a. Electronic Trip unit family cover entire protection schemes of Electrical system
- b. Suitable for 16 A to 1000 A
- c. Available from basic LS/IN to high end energy metering & communication versions

- d. Dedicated Motor protection ETU for entire range
- e. High end versions of ETU family are able to
 - i. Communicate - communication module
 - ii. Ensure Zone selectivity - ZSI module
 - iii. Temperature monitoring and protection using - Temperature module

5) Thermal Magnetic Release

- a. Suitable for 16 A to 800 A
- b. Wide range of overload protection starting from 67% to 100% In
- c. Inbuilt Ambient Temperature Compensation mechanism to ensure same tripping characteristics for wide range of operating temperature

6) Module Integration

- a. Modular Architecture
- b. No load-line biasing
 - i. Either side of MCCB terminals can be used as Load or Line
- c. More number of internal accessories for better control
- d. Class II insulation from front facia cutout region

Range Features

- › Range from 16A to 1000A
- › In 3 pole & 4 pole
- › Breaking capacities up to 200kA @ 415Vac
- › Protection using both thermal magnetic and Electronic based releases
- › Various types of terminations
- › Fixed and withdrawable versions[#]
- › MCCBs for Motor backup protection
- › MCCBs for Distribution and SD versions
- › MCCBs for DC applications
- › High electrical and mechanical life
- › Wide range of operational voltages
- › Wide range of common Internal and External accessories
- › Conforms to IS/IEC 60947-2, IEC 60947-2, IEC 60068 and EN 60947-2
- › RoHS and REACH compliance

~ Spreader terminals are mandatory

Release Features

- › All Electronic Trip unit comply EMI & EMC as per IEC 60947-2
- › Wide range of basic & advanced protections using thermal magnetic and Electronic based releases
- › Individual LEDs for fault indication
- › Long time (overload) setting starts from 0.25 In for iTRP release and 0.67 In for thermal magnetic release
- › In-built earth fault and neutral protection
- › In-built display module for enhanced user interface
- › No need for external power supply for breaker settings and viewing trip records
- › Communicable MCCBs from 40A to 1000A
- › Available communication protocols-TCP IP, Modbus

Auxiliary Contacts & Trip Alarm Contacts

DZ MCCB range comes with two sizes of changeover contacts covering the entire range from 16 A to 1000 A. These contacts enable remote monitoring of MCCB status, including ON, OFF, and Trip. They are suitable for indications, electrical locking, relaying, and more.

Salient Feature:

- › Offered in 3 sizes encompassing the entire 16 A to 1000 A range
- › Sturdy installation, mountable using snap-fits and easily removable.
- › 100% of the MCCB's rated mechanical endurance
- › Choice of 2-Aux contacts from 16 A to 160 A, & 3-Aux contacts from 250 A to 1000 A
- › Identical changeover switches for both Aux and TAC applications

Specifications

Mounting	Screw			Snap fit	
Rated frequency (Hz)	50/60				
Rated Duty	Continuous				
Standard	IEC 60947-5				
Termination	Pre wired (0.5 mm²) 500mm length				
Electrical life	100% of MCCB Mechanical life				
Mechanical life	100% of MCCB Mechanical life				

Shunt Release

The Shunt release enables tripping or cutting off the supply at the MCCB through an electrical remote command. If the operational voltage falls within a range of 70% to 110% of its rated operational voltage, the shunt release will trip the MCCB. It mechanically locks the main mechanism of the MCCB, making it impossible to switch ON the MCCB until control voltage is applied. This feature prevents closing the MCCB with the shunt release energized. There is no tripping memory

when the MCCB is in the OFF condition. If the MCCB is in the OFF condition and the shunt release receives a tripping signal in the form of rated voltage during maintenance, the next ON operation will not trip; the MCCB will be switched ON. When inserting an energized shunt release in the MCCB, if the MCCB is switched ON or in the closed condition, the Shunt facilitates tripping of the main mechanism to open the MCCB before full insertion.

Key Feature:

- › Shunt release coils are continuously rated coils
- › Low burden on the control circuit system due to low VA
- › Finger-proof termination with IP20 protection
- › Offered in only 3 sizes covering the entire range of 16 A to 1000 A
- › Sturdy fitment and mounting using screws
- › Endurance: 100% of the MCCB's rated mechanical endurance
- › Options of 2-UV or 2-Shunt or 1-UV and 1-Shunt from 250 A onwards till 1000 A

Product	SHUNT RELEASE		
Versions	Size 0	Size 1	Size 2
Supply type	AC	AC/DC	AC/DC

Rated duty	Short Rated, Continuous at 240	Continuous	
Shunt trip	(0.7 to 1.1) Un		
Connection	Pre-wired (0.5 mm²)		
Endurance	30% of breaker mechanical endurance		

Shunt Release			
Voltage 50/60 Hz	Power Consumption in short time (VA)		
	DZ0 (Size 0)	DZ1/ DZ2/ DZ4 (Size 1)	DZ6/DZ7 (Size 2)
415 AC	5	5	5
240 AC	5	5	5
110 AC	5	5	5
48 AC	5	5	5
24 AC	5	5	5

Under Voltage Release

The Under Voltage release facilitates tripping or cut-off of supply instantaneously, if the operational voltage falls to a value between 35% to 70% of its rated operational voltages.

Under-voltage release mechanically locked the main mechanism of MCCB and makes it impossible to switching ON the MCCB until it is no voltage or under voltage in control circuit. This is facilitating through feature which do not allow to close the MCCB with under-voltage release de-energised.

Salient features

- › Under-voltage coils are continuously rated coils
- › Low burden on the control circuit system due to low VA
- › Finger-proof termination with IP20 protection
- › Offered in only 3 sizes covering the entire range of 16 A to 800 A
- › Sturdy fitment and mounting using screws
- › Endurance: 100% of the MCCB's rated mechanical endurance
- › Options of 2-UV or 2-Shunt or 1-UV and 1-Shunt from 250 A onwards till 800 A

There is no tripping memory in OFF condition of MCCB. If MCCB is in OFF condition and under-voltage release got tripping signal in form of under voltage during maintenance, then next ON operation will not be tripped, MCCB will get switched ON.

While inserting de-energised under-voltage release in MCCB, if MCCB is switched ON or in close condition then UV facilitate tripping of main mechanism to open the MCCB before full insertion.

External Accessories

Rotary Operating Mechanism (ROM)

Rotary Operating Mechanism (ROM) used in dsine DZ is available in two variations: Direct and Extended versions.

Direct ROM: The ROM is directly attached to the operating mechanism of the MCCB and is used to manually operate the breaker.

Salient features

- › Clear indication for ON/OFF/TRIP status
- › Direct access to the "Push to Trip" button
- › Suitable for use in any quadrant
- › Door interlock feature when in ON mode, with option to override
- › Door interlock feature when in OFF mode, with padlock capability
- › Supports three padlocks with diameters ranging from 5mm to 8mm
- › Door sensing functionality
- › Mechanical interlock compatibility with various keylock types such as Ronis, Kirk, Allen-Bradley, Fortress, Castle, etc.
- › Ingress Protection (IP) ratings of IP42 and IP54 for the direct and extended versions respectively

Extended ROM: The ROM is equipped with extensions or additional components, possibly for specific applications or installations where a longer reach or different operational setup is required.

Key Lock

For mechanical interlocking through extended rotary operating mechanism, a panel mounted key lock is available. The selection of the key lock as per the table:

Selection

I/C or B/C	Key Lock
2 I/C	Any 1 type of lock for both MCCBs
2 I/C and 1 B/C	Lock 1 and Lock 2 for I/C and Lock 12 for B/C
3 I/C and 2 B/C	Locks 1, 2, 3 for I/Cs and Locks 12, 23 for B/Cs

Type of lock	Exclusively operable by key nos.
1	1
2	2
3	3
12	1, 2 & 12
23	2, 3 & 23

Plug-in Module

MCCBs with “Plug-in” module is used in applications which demand higher levels of service continuity and a fast replacement.

In case of a fault in an electrical system, MCCB clears the faults efficiently and effectively. In sites requiring higher level of

service continuity such as Hospitals and powerplants, the site demands replacement of MCCB immediately. In such cases, MCCB with plug-in base can be safely removed from the system without removing the power connections or terminations and can be replaced with the new MCCB.

Once MCCB is removed from the plug-in base, the system also offers complete isolation from the supply and hence, it enhances the safety of personnel working on down-stream feeders.

Salient features

- › Inbuilt safety interlock - a mechanism which prevents plug in/out of the MCCB when the MCCB is in ON condition to prevent connecting or disconnecting the power circuits under load conditions.
 - › Suitable for different types of terminations i.e., Front terminations, Spreader links, Box Clamps and Rear terminations in line with MCCB terminations.
 - › True indication of the status of MCCB through potential free auxiliary switch - in service position.
- › DZ7 Plug-in comes with a driving mechanism for ergonomic operation, and it also has a push button position locking mechanism improving user experience.
 - › Ingress Protection (IP)
 - » IP20 - MCCB plug out condition.
 - » IP40 - MCCB plug in condition.

Constructional details

The new dsine DZ MCCB Plug-in module consist of following accessory kits:

- › Plug-in base, with terminations, is the fixed part and can be panel mounted
- › Conversion kit, consisting of moving parts, which is mounted on the MCCB.

Plug-in base is an insulated thermoset component, which has provisions to accommodate socket assemblies, auxiliary switch assembly, IP covers, finger shields, terminals, mounting plates, and shields. It also includes a slot for MIL (Mechanical interlock) actuation. DZ7 Plug-in has side plate assemblies having position lock mechanism and driving mechanism.

Finger shield and IP covers are inserted in the Plug-in base at the respective positions of all phases to ensure Ingress Protection (IP). The plug-in base also has provision to accommodate all types of termination like Front terminations, Spreader links, Box Clamp and Rear terminations in line with the MCCB.

Conversion kit contains a rear plate assembly which has safety lock mechanism. Rear plate is fastened to the rear side of MCCB by two screws (4 screws in case of DZ7 Plug-in). Safety lock mechanism is used for arresting the movement of MCCB to or from the connected position when the breaker is in ON condition.

The mechanism consists of a safety lock which is connected to the rear plate by using a pin. It is spring loaded and is capable of locking itself against a corresponding surface in the plug-in base when the MCCB is switched ON. The mechanism prevents the insertion of MCCB which if it is in ON condition.

The Kit also includes contact stud plugs which are fastened to the MCCB terminals and make electric contact with the Plug-in base terminals through socket assemblies (Jaw assembly in case of DZ7 Plug-in).

Handle is inserted to the terminal side of the MCCB which ensures easy removal of the breaker from Plug-in base in OFF condition. In DZ7 Plug-in, metal handle rods are provided for ergonomic loading and unloading the moving kit into the fixed kit. The driving mechanism is then used to plug-in the MCCB. DZ7 Plug-in also comes with shrouds for MCCB to meet IP requirements.

Specifications

Draw-out Module

Draw-out MCCBs are used in applications which demand higher levels of service continuity. In case the MCCB develops a fault and needs replacement, MCCB can be safely removed from the draw-out system without removing the power connections and replaced with new MCCB.

Draw-out module facilitates all other electrical accessories like UV, shunt, EOM and release can be wired through secondary isolating contacts (SIC).

In test position, accessories and wiring schemes can be tested without removing the MCCB from the cradle.

In disconnected position, it offers complete isolation from the incoming supply and hence enhances the safety of operator or user.

Salient features

- › It offers Locking in three distinct Positions:
 - › **Disconnect:** the device is disconnected completely, both power and auxiliary connections are disconnected and can be removed from fixed base safely
 - › **Test:** the power circuit is disconnected, and device is ready to check auxiliary operations
 - › **Connect:** the power circuit is connected
- › Safety lock along with ROM or EOM, ensures that the draw-in or draw-out of breaker is possible only in OFF condition.
- › MCCB cannot be switched ON when the racking handle is inserted.
- › 'Disengage latch' reliably holds the breaker with cradle in disconnected position, to ensure operator safety.
- › Pad lock has been provided to prevent unauthorised draw-in or draw-out operation. Termination region on draw-out base (cradle) is same as that of MCCB, hence termination capacity and termination accessories like box clamp, rear terminal and spreader links are same and uses same breaker accessories like phase barrier, shroud, and mechanical interlock.

All these positions are provided with electrical and mechanical indications.

Constructional features:

The new Dsine DZ MCCB Draw-out modules consists of three basic parts:

- › Draw-out fixed part, can be either panel mounted, or rail mounted (Only Panel Mounted for DZ7 Draw-out)
- › Conversion kit, consisting of moving parts, which is attached to the standard circuit breaker
- › Racking handle

Draw-out fixed part has Plug-in base, which has provisions to accommodate socket assemblies or jaw assemblies, IP covers, finger shields and terminals. Side plate assemblies of Draw-out module has racking mechanism, Position lock mechanism, Pad locking mechanism, cradle secondary isolating contacts (SIC) and electrical indication. It also has a panel kit facilitating closed door operation and giving mechanical indication.

These side plate assemblies are assembled with Plug-in base.

Conversion kit contains two rear plate assemblies & special ROM for safety features.

These rear plate assemblies are to be fastened to the rear side of MCCB by means of four screws by user.

Power electrical contact plugs are fastened to the MCCB terminals and make electric contact with the cradle terminals through socket assemblies.

The termination region of MCCB ensures IP40 from front fascia to end user in case MCCB is removed from fixed base.

Rotary operating mechanism is to be attached to the top of MCCB with 4 mounting screws. It has all the safety feature to ensures the rack-in/out of the breaker only in OFF condition.

*We can provide all the feature of rotary handles in draw-out also such as door sensor, door interlock, etc.

* With Drawout Motor Operator Interlock

Electrical Operating Mechanism

Motor Operator is a premium external accessory to Moulded Case Circuit Breaker (MCCB). Motor Operators are widely used for remote switching and auto source changeover schemes. Motor operators find applications in industry segment, infrastructure and building segment with critical installation areas like hospitals.

Motor operator address MCCB needs of Reliable auto source switching, process industries,

Infrastructure application, optimized energy cost and digital connectivity.

Salient Features

- › Compact motor operator with size 87 x 75 x 100 mm (Hx WxD) in DZ1 & DZ2.
- › Operates within a wide voltage band (150 VAC – 270 VAC)
- › Features an auto pop-up type padlock. Padlocking is possible in both ON and OFF state of MCCB.
- › Selector Switch with three distinct modes of operation as follows:
 - Auto mode** - Unit can operate electrically. Manual operations and padlocking are disabled
 - Manual Mode** - Unit can be operated manually. Electrical operations and padlocking are disabled.
 - Lock Mode** - Unit cannot be operated. Auto and Manual modes are disabled. Padlocking is possible.
- › Ingress protection complying IP40
- › 'Single hand hinge-out' feature with retention snaps for easy access to the internal accessories of MCCB like UV/SR & AUX/TAC. No need to un-mount EOM for mounting / replacing internal accessories.
- › Ergonomic supplementary handle for easy manual operations.
- › Endurance life up to 100% mechanical life of MCCB operations for reliable switching.
- › Easy access to MCCB termination. No need to un-mount EOM for assembly and maintenance of MCCB termination
- › Flag indication of ON/OFF & charge/Discharge state Common design for 3P and 4P
- › Easy access to protection setting on MCCB.
- › True indication for ON/OFF & Trip.
- › Electrical indication of charge/discharge state through Lamp.
- › Electrical indication of Auto/Manual mode through Lamp.
- › Voltage error indicator LED at MO front facia for voltage error <150 or >270 V in case of DZ6 & DZ7 EOMs

Specifications

Mechanical Interlock (MIL)

In source change-over systems, Mechanical Interlock (MIL) prevents connection to both sources at the same time.

When two MCCBs are working in parallel, there may be a requirement to interlock two MCCBs mechanically so that when one is being turned ON, the other remains in OFF position, so that only one MCCB may be closed at a time.

MIL also finds its application in ASTS for additional safety, especially in an environment having high vibrations. MILs are used along with Electrical interlock.

The new dsine DZ has three versions of Mechanical Interlock depending upon their philosophy of interlocking.

Mechanical Interlocking kit range	DZ1	DZ2	DZ4	DZ6	DZ7
Front Slider	✓	✓	✓	-	-
Rear Base Plate	-	-	✓	✓	✓
Cable Base Plate	✓	✓	-	✓	-

1) Mechanical Interlock - Front Slider

Two MCCBs installed side by side can be interlocked using Front MIL. Interlocking is carried out by means of front slider kit which prevents the unintentional operation of interlocked MCCB through mechanical feedback. It is applicable from DZ1 to DZ4 having the possible combinations:

MCCB INTERLOCKING MATRIX - Front Slider

MCCB	DZ1	DZ2	DZ4
DZ1	✓		
DZ2		✓	✓
DZ4		✓	✓

2) Mechanical Interlock - Rear Base Plate

Two MCCBs can be interlocked using Rear Base plate MIL installed side by side on base plate. Interlocking is carried out by means of mechanism located behind the base plate of installed MCCBs. This gives flexibility to operator or user to access the front controls and status indication of MCCB. It is applicable for the DZ6 range with interlocking provision as follows:

MCCB	DZ4	DZ6	DZ7
DZ4	✓	✓	
DZ6		✓	
DZ7			✓

Constructional Detail

MIL - Rear base plate is suitable for the fixed, plug-in and draw-out versions of MCCBs, both 3P and 4P. It consists of a base plate, two operating lever mechanisms and MCCB specific mounting plates with actuators. Operating lever mechanisms are assembled to the base plate with suitable actuators at user end. Suitable mounting plates are mounted to the base plate upon which MCCBs are mounted. A complete base plate assembly can be installed horizontally or vertically on the mounting plate of the panel.

Some of the salient features are

- › Min. 26 mm clearance between 3P and 4P with spreaders and Rear termination with link to the base plate
- › Common design for 3P and 4P
- › Suitable for all types of terminations applicable to basic MCCB
- › Suitable for withdrawable Plug-in and Draw-out modules, with all type of MCCB terminations applicable
- › Suitable for MCCBs having ROMs and EOMs
- › Suitable for horizontal or vertical mounting orientations

3) Mechanical Interlock - Rear Base Plate with cable

Two MCCBs can be interlocked using this Rear Base plate MIL with cable installed even 5m apart. Interlocking is carried out by means of mechanism located behind the base plate of installed MCCBs and feedback cable. This gives flexibility to

the operator or user to access the front controls and status in direction of MCCB and cable gives flexibility to installed at any distance up to 5m* It is applicable from DZ1 to DZ6 MCCBs.

***Note:** Max. Cable length is 5m

MCCB INTERLOCKING MATRIX

MCCB	DZ1	DZ2	DZ4	DZ6
DZ1	✓			
DZ2		✓	✓	✓
DZ4		✓	✓	✓
DZ6		✓	✓	✓

Constructional Detail:

MIL - Rear base plate with cable is suitable for the fixed, plug-in and draw-out version, both 3P and 4P. It consists of two base plates, with operating lever mechanisms, actuators and cable. The cable assembled between two operating lever mechanisms facilitates interlocking between two MCCBs. The

MCCBs are mounted on the respective base plates and then cable is calibrated for interlocking. The position and orientation of two base plate assemblies can be flexibly installed away from each other in the panel.

Some of the salient features are:

- › Min. 26 mm clearance between 3P and 4P with spreaders and Rear termination with link to the base plate
- › Possible to interlock different MCCB frames
- › Common design for 3P and 4P
- › Suitable for all types of terminations applicable to basic MCCB
- › Suitable for withdrawable Plug-in and Draw-out modules, with all type of MCCB terminations applicable
- › Suitable for MCCBs having ROMs and EOMs
- › Suitable for horizontal or vertical mounting orientations
- › Cables are provided in the length of 1m, 3m and 5m depending on requirements.

Maintenance Guidelines:

- › Minimum cable bending radius of 80mm to be maintained.
- › Cables should not be looped.
- › Cable should not be disturbed after calibration.
- › Cable should be supported appropriately at required locations to prevent sagging.
- › Re-calibration and verification to be done every 30 days to ensure there is no abuse with cable calibration.
- › Calibration should be done by authorised service engineers only.

Electronic Modules

M3U Communication Module

M3U Communication module is the solution for connecting MCCBs to a Modbus network for remote supervision and control of circuit breaker.

Feature:

- › MODBUS communication interface for all MCCB's -Thermal Magnetic, switch disconnecter (Status Communication) and Electronic (status and parameter)
- › Separate status indication for Trip indication (TAC) and Fault Trip Indication (ETAC) with electronic trip units
- › Mechanical operation counter
- › Remote operation Close, Open and Reset via communication with motor version
- › EMI/EMC Compliant as per IEC - 60947-2
- › DIN rail mountable
- › Special stacking connector to stack multiple modules on DIN rail without using connecting wires

Specification

Zone Selective Interlocking (ZSI) Module

Zone selective interlocking is a method which allows two or more circuit breakers to communicate with each other so that short circuit or ground fault can be cleared by the breaker closest to the fault with a minimum time delay. Module is a part of dsine-DZ MCCB system of iTRP-4 and iTRP-5 only. Enables signaling between upstream ACB (U Power Omega) or MCCB (iTRP-4/iTRP-5).

ZSI module can be connected to 15 downstream breakers with auxiliary supply.

The module can be used to coordinate the system for short circuit faults or earth faults or both.

The module is DIN rail mounted and has to be hardwired with downstream breakers.

Feature:

- › Zone selective interlocking for Short circuit or ground fault or both
- › EMI/EMC Compliant as per IEC-60947-2
- › DIN rail mounted

Specification	
Module	Zone Selective Interlocking Module
Input Voltage Rated	24VDC ± 20%
Power Option	Self-powered
	Auxiliary supply
Maximum Current	10mA @ 24VDC
Configuration	Hardwired
Type of Protection	Short Circuit / Ground Fault / Both
Maximum length between two ZSI Module	300m
Maximum number of Circuit Breakers to Downstream (ZSI Out)	3 Nos (Self-powered)
	15 Nos (Auxiliary Powered)
LED Indication	1-Power (Green LED) - continuous ON

Temperature Module

Overheating of the busbar/cables can reduce the life of the insulation, busbar, cables and even breakers. Periodic loading conditions can cause the metal to heat and cool continuously

Some of the causes of overheating are as follows

Any of the following reasons can lead to heat generation at the breaker terminal.

- › Improper termination
- › Improper Bus bar design
- › Loose joints
- › De-rating not considered while selection of breaker
- › Eddy currents

Temperature module senses temperature through thermistors connected at each pole of MCCBs. It sends the data to trip unit and to remote system through communication module thus offering temperature metering & over temperature protection functionality.

resulting in the deterioration of the same and loosening of the joints, which is one of the major cause of short circuit fault.

Specification	
Module	Temperature Module
Module location	Sub module
Input Voltage Rated	24VDC \pm 20%
Metering Temperature Range	-20 to 135 °C
Protection temperature Range	80-115 °C
Step Size Range	1 °C
Pre alarm Range	50% - 95%
Step Size (Pre alarm)	1%
Accuracy	\pm 2 °C
Mode	None, Trip, Alarm
Time Delay	1 Min
Indication	5 Leds 1 LED Power (Green Colour continuous) 4 LED - Over Temperature per sensor (Red Colour continuous) LED Behaviour: a. Pre -alarm - the respective red LED will blink 500ms ON/ 500ms OFF b. Trip - the respective red LED will blink 100ms ON/100ms OFF. c. OFF - Temperature below set threshold
Sensor	4 Thermistor
Sensor length	1 m each
Module mounting	Din rail

Programmable Relay Module (PRM)

Programmable relay module consists of 4 configurable potential free relay contacts -2 change over contacts and 2 NO contacts.

PRM can be used with electronic breaker or conventional thermal magnetic breaker along with communication module. With thermal magnetic breaker, the ON/OFF/TRIP status is indicated through the relays.

Also remote operation command is executed through one of the relay.

- › 4 Programmable relay Contacts - 2 C/O & 2 NO
- › Remote annunciation
- › Breaker ON/OFF/Trip status indication
- › EMI/EMC Compliant as per IEC -60947-2
- › DIN rail mountable

Specification	
Module	Programmable Relay Module
Input Voltage Rated	24VDC \pm 20%
LED Indications	1 LED for Power (Green LED) blinking:- Standalone - 100msec ON/ 100msec OFF On CAN Bus - 500msec ON/ 500msec OFF
	4 LED for Relay output status (Red LED Steady ON, on relay activation)
Relay contact	4 configurable contacts: 2 change over contacts + 2 NO contacts
	6 Amp, 250VAC/24VDC
Maximum switching Power	1500 VA/150W
Relay activation sources	Trip Status of all the protections offered by iTRP-4 & iTRP-5. Alarm Status of basic protections in iTRP-4 & iTRP-5. Breaker Status – ON / OFF / TRIP

External Neutral Sensor (ENS)

External Neutral Sensors ENS provides solution for addressing the requirements of 3-phase 4-wire system wherein the neutral pole is not included in the MCCB.

ENS are suitable for electronic release type dsine DZ MCCBs.

ENS offers neutral current sensing when used with MCCBs equipped with iTRP-1 to iTRP-4 releases, as well as current and voltage sensing for MCCBs equipped with iTRP-5 releases.

Salient Features

- › Current sensing through Rogowski coils offering a high linearity in current sensing
- › Suitable for voltage sensing for Energy metering purposes
- › Connection via micro USB for hassle-free connection
- › Types of following termination are offered
 - » Prepared Cables lug
 - » Spreaders
 - » Direct Links

MCCB	Suitable ENS Type	Current Rating
DZ1/DZ2	DZ1/2 ENS	25A - 160A
DZ4	DZ4 ENS	160A - 250A
DZ6	DZ6 ENS	250A - 400A
DZ7	DZ7 ENS	400A - 800A
DZ7 1000A	DZ7-1000A ENS	1000A

Additional Technical Information

Altitude Correction Factors

Altitude does not significantly affect circuit breaker characteristics up to 2000 m. Above this altitude, it is necessary to take into account the decrease in the dielectric strength and cooling capacity of air.

The following tables give the altitude correction factors for various circuit breaker characteristics

	Description		De-rating Factor			
			<2000 m	3000 m	4000 m	5000 m
DZ1-DZ7	Rated Operational Voltage	U_e	1.00	0.90	0.80	0.70
	Rated Nominal Current	I_n	1.00	0.97	0.94	0.91
	Insulation Voltage	U_i	1.00	0.78	0.69	0.61
	Impulse Withstand Voltage	U_{imp}	1.00	0.78	0.69	0.61

Temperature Derating Details

Dsine DZ derating is 1% of $I_n/^\circ\text{C}$, starting from 50°C for TMR
 For example,
 $I_n=100\text{A}$ for DZ1 TMR, derating will start from 50°C to 70°C
 At 60°C @ $I_n = 100\text{A}$
 Deration would be $(60^\circ\text{C} - 50^\circ\text{C}) \times 1\text{A}$
 $= 10^\circ\text{C} \times 1\text{A}$
 $= 10\text{A}$
 i.e. $100\text{A} - 10\text{A} = 90\text{A}$

Dsine DZ derating is 1% of $I_n/^\circ\text{C}$, starting from 55°C for MPR
 For example,
 $I_n=100\text{A}$ for DZ1 MPR, derating will start from 55°C to 70°C
 At 60°C @ $I_n = 100\text{A}$
 Deration would be $(60^\circ\text{C} - 55^\circ\text{C}) \times 1\text{A}$
 $= 5^\circ\text{C} \times 1\text{A}$
 $= 5\text{A}$
 i.e. $100\text{A} - 5\text{A} = 95\text{A}$

Power Loss Data

The power loss of an electrical device is essential for determining the overall system efficiency, measured in watts. According to Annex G of IEC-60947-2, the total power loss of a circuit breaker is calculated by multiplying the power loss per pole by the number of poles. This measurement, conducted under rated current in free air and with minimal voltage drop across the terminals under cold conditions, provides an indication of the heat generated in specific operational scenarios.
